

Globi's Forest Lab

Globi goes searching for tracks in the woods: What animals live here? What is the soft forest floor made of? How old do trees grow? These and further questions are discussed in "Globi's Forest Lab". On this interpretative nature trail, children from seven to twelve years learn about the ecosystem of the forest with a student guide, while playfully deep diving into the world of natural sciences. At Waldlabor Zurich, close by to ETH Campus Hönggerberg, they spend an instructive morning or afternoon by performing fascinating experiments. They learn about the circle of water, find out how trees grow tall and what layers a forest consists of.

"Globi's Forest Lab" has evolved through a cooperation with Waldlabor Zurich.

The outdoor nature trail is suitable for school classes with children aged 7 to 12.

Booking

School classes of 10 to 25 kids may request individual dates via this [booking form](#). The lead time is four weeks.

180 minutes: CHF 250.00 per class
Payment is made in advance by invoice.

The trail takes place outdoors from spring to autumn in all weathers conditions. Suitable clothing is requested.

Each child will be given a research diary, so they are able to continue researching the topics at home. Additional didactic material to deepen the topics in class will be provided to teachers.

Please note the [booking conditions](#).
